Role Overview

We are looking for a skilled Software Development Engineer (SDE) with strong hands-on experience in **Python and Django**. The ideal candidate should have experience building scalable backend systems, RESTful APIs, and high-performance applications.

Key Responsibilities

- Design, develop, and maintain backend services using Python and Django.
- Build scalable and secure RESTful APIs.
- Develop database schemas and optimize queries for performance.
- Write reusable, testable, and efficient code.
- Perform code reviews and participate in architectural discussions.
- Troubleshoot, debug, and optimize application performance.

Mandatory Skills

- 3–5 years of backend development experience.
- Strong hands-on experience in Python.
- Strong experience in Django framework (mandatory).
- Experience in building REST APIs using Django REST Framework (DRF).
- Strong knowledge of SQL databases (PostgreSQL/MySQL).
- Understanding of ORM, database design, and query optimization.

Good to Have

- Knowledge of Docker and containerization.
- Experience working with cloud platforms (AWS/Azure/GCP).
